Apple Inc.

Brief history: Apple computer was founded on April 1st, 1976, college dropouts Steve Jobs and Steve Wozniak created Apple Computer, Inc. with the goal of transforming people's perceptions of computers. Jobs and Wozniak aimed to reduce the size of computers so that people could

use them at home or at work. In short, they desired a computer that was easy to operate. Basically wanting to create portable computers people can use anywhere and anytime. The idea of building Apple was made in Steve Jobs` garage.

Mission and vision statements

The simple mission for Apple is to make technology empowering for people and to not only impact their lives but to make a difference and enrich lives. Apple has stated that their target is to generate a competitive strategy and intensive growth to for their advanced technology to compete with any market product it is put against. Apple`s vision is” *to make products on earth and to leave the world better then we found it*”. The company`s statement points is to make best products and the application of high standards for productivity and efficiency.

The intended target audience for the Apple computing company is middle to high income professionals, students and creative 18–45-year-olds, who would purchase premium design and innovation even with its high prices.

[This Photo](#) by Unknown Author

Specific Goals for this website:

- Is to showcase how Apple would like to reduce carbon their emissions by over 75% by the year 2030.To make it aware to the public how Apple is take initiative to make the world environmentally a better place.
- This website will be available to the youth and be transparent about all the capabilities that will be available for them to use and understand thus bringing more of the youth to the company(more customers)
- Will allow for diversity amongst the youth and young adults across the world using technology that Apple has developed.

The key indicators that determine the success of Apple is the overall customer loyalty they have no matter how many products are released every year people will always purchase them

Strengths

- Since Apple has access to a very powerful ecosystem with integrated hardware, software and services leading to a great customer loyalty this website will gain attraction

- With the \$85.2 billion annually that Apple receives from purchases, the budget for the website can be set at a premium resulting in a professionally made quality website.
- The website will accommodate visually impaired individuals by reading out what is on the screen for them so they can get a chance to understand the website much better and since Apple is mainly a tech company this will attract more customers that are visually impaired.

Weaknesses

- With the specific budget that is set for this website Apple has a high possibility of rejecting the proposal simply because it will not really be professionally made
- High priced products that will be advertised on the website might cause a disinterest in customers thus reducing customer loyalty for the company.
- Limited products to be advertised because Apple has only one manufacture which is in China.
- Since Apple uses a lot of Ai it might cause disinterest to customers because a lot of people are fond of the thought of Ai which might lead people to think that the website is produced by Ai.

Improving on weaknesses

- Creating a professional website that will attract the customer then a weak website that will pull customers away.
- Decrease the use AI with making everything that will not harm the planet as Apple themselves has stated that they would like to make the world a better place environmentally
- Expand manufacturing to other parts of the world instead of having 90% of it in China.

Features and functionality

Homepage will include buttons that will make it easier for the user to go from page to page, it will contain the information about the company. About us, contact page, product page will all be hyperlinked allowing the user to simply go back and forth between pages easily. Product page will have a list of all the product latest to old that Apple has produced over the past few years. About us page will include a history of the making of Apple and their physical stores (Istores). Contact page will include a list of phone numbers and email addresses for the user if they have any delivery issues.

Design and user experience

This will be the design and the user experience that will be used for the whole website: White – main background

Black – primary text

Light Gray – sections/background contrast

Dark Gray – secondary text

This works because Apple uses more minimal and neutral colours with most/all their products.

The website will contain controls that will allow the user to go from page to page without having to open different tabs.

Different font sizes will be used and be contained in the website. Colour scheme will match the minimalistic type of content that Apple uses a simple black, white/grey type of scheme.

Programming language that will be used: JavaScript with html- to structure the webpages and CSS-to control the presentation, styling and layout of the content structured with HTML and to produce a good and functional website that will allow people to understand and comprehend what the website is about. It will also help visually impaired people by reading out what is on the screen for them

Structure and layout:

The header on the left will contain the Apple logo, centre parts will include the Macbook, Iphones, Ipad, watch and support centre. The bottom part will have a shopping bag icon for the user to put all the items that they are trying to buy in their bag.

Timelines and milestones

For this project will first include the planning of the proposal which can take up to 1-2 weeks. The next stage will include estimating a made- up budget and presenting said proposal then the final step would be to develop the website which could realistically take about 3-4 weeks. Wireframes also must

be developed for the planning of the website.

Budget

A low-end budget of R4900 to start the website if the company would require any additional personal features to the website that would be another R1800 so R6300 for the website. Now to maintain the website every month that would be R900 per month.

- Using company name-R180
- Design (my time and my designs)-R2000
- Development of the website-R1000-1500
- Images free/bought-R400
- Maintenance-R900/month

Total: R4480-R4980

+If company wants any type of different personalised designed total budget=R6300

Nike

Brief history about Nike: Nike (originally founded as Blue Ribbon Sports) was founded by a veteran track and field coach in the late 1950s, Bill Bowerman along with his athlete trainee Phil Knight. The reason for the creation of the Nike company was simply because Bill was displeased with the current available running shoes at the time, which was simply made with leather and metal. He then started shaving off shoes to help runners to run faster instead of having weight on their feet.

Mission and Vision statement

Nike`s mission statement is to bring inspiration and innovation to every athlete in the world, and their vision statement is stated as to do everything possible to expand human potential.

Nike has stated that their target audience are 15–45-year-old that are active, ambitious, especially athletes.

Goals

The current goals for this website are **is** diversification and comfortability for the youth, allowing supply chain not only for Nike to increase with customer loyalty hopefully using my website. To sell more Nike products to consumers.

Strength and weaknesses:

The strengths of this website will be that it will be created and design a member of the youth who knows how the other minds and personalities of her fellow youth it will be well implemented to benefit the company by allow the youth to relate making it an increase in sales. The website will unfortunately not be done by a professional so it might not look as good as professionally made websites.

Functionality and features :

The homepage will include information about the company like the origin, the information about the products being sold and the navigation to help new customers. The about us will have the whole background of Nike and the creators of the website. Products such as shoes, clothes will be available on the website.

Design and overall user experience:

The design will be bold with vibrant colours to represent the variety of colours that Nike uses, it will have big bold visuals and a strong contrast, minimal text to keep the user's **users** interest. There will be a variety of pictures about the different products. The colour scheme will be black, white with bright accents with colours like Neon green and red to represent the neon sign of Nike.

The programming languages used for this website will be JavaScript with html and CSS css

For this project will first include the planning of the proposal which can take up to 1-2 weeks.

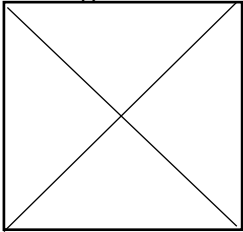

The next stage will include estimating a made up budget and presenting said proposal then the final step would be to develop the website which could realistically take about 3-4 weeks.
